Summary

Software Engineer with 3+ years of experience building scalable Java backend and full-stack applications using Java, Spring Boot, React.js, REST APIs, Microservices, and SQL. Experienced in designing distributed systems, developing event-driven services with Kafka, optimizing database performance, resolving production issues, and delivering enterprise software in Agile environments.

Education

Atria Institute of Technology

Bachelor of Engineering in Computer Science

Aug. 2017 – Aug 2021

Bengaluru, Karnataka

Technical Skills

Languages

Java, SQL, JavaScript, TypeScript

Backend

Core Java, Spring Boot, Spring MVC, Spring Data JPA, Spring Security, REST APIs, Microservices

Messaging

Apache Kafka, RabbitMQ

Frontend

React.js, TypeScript

Databases

PostgreSQL, MySQL, SQL Server

Tools

Git, Maven, Docker, Jenkins, Linux

Testing

JUnit, Mockito

Concepts

OOP, Collections, Multithreading, Design Patterns, SQL Optimization, System Design, Agile/Scrum

Experience

VIS Networks

Software Development Engineer – Java Backend

Bangalore, India | Dec 2022 – Feb 2026

- Designed, developed, and maintained scalable Java Spring Boot microservices and REST APIs supporting enterprise applications.
- Wrote optimized SQL queries and integrated applications with PostgreSQL and MySQL using Spring Data JPA.
- Built asynchronous processing workflows using Apache Kafka for reliable event-driven communication.
- Implemented authentication and authorization using Spring Security and JWT.
- Debugged production issues, performed root cause analysis, and resolved application defects.
- Conducted code reviews, improved code quality, and contributed to engineering best practices across the team.
- Developed unit and integration tests using JUnit and Mockito.
- Containerized applications using Docker and contributed to CI/CD pipelines using Jenkins and Git.

- Collaborated with frontend, QA, DevOps, and product teams to deliver production-ready features throughout the Agile development lifecycle.
- Participated in low-level design discussions, API design, and implementation of scalable backend components for enterprise applications.

Project

Real-Time Enterprise Monitoring Platform

Tech Stack: Java, Spring Boot, Kafka, React.js, MySQL, Docker

- Developed backend microservices for monitoring enterprise network devices and services.
- Designed REST APIs for device management, health monitoring, and alert generation.
- Built Kafka-based asynchronous processing for real-time event handling.
- Optimized SQL queries and database access for faster response times.
- Implemented fault-tolerant backend services with centralized exception handling and logging.
- Collaborated with frontend engineers to integrate APIs with React dashboards.
- Resolved production issues and improved overall application performance and reliability.

Distributed Recovery & Queue Processing System

Tech Stack: Java, Spring Boot, MySQL, Multithreading

- Designed and implemented multithreaded recovery workflows for failed transaction processing.
- Developed retry mechanisms, queue processing modules, and asynchronous workflows to automate recovery operations.
- Optimized concurrent processing using Java multithreading to improve system throughput and reliability.
- Applied object-oriented design principles and exception handling to build scalable and fault-tolerant backend services.

AI-Powered Knowledge Management Platform (Personal Project)

Tech Stack: Spring Boot, React.js, TypeScript, PostgreSQL, OpenAI APIs, Docker, AWS

- Built an AI-powered knowledge management platform integrating OpenAI APIs for document summarization, semantic search, and conversational question answering.
- Designed and implemented RESTful APIs using Spring Boot with JWT-based authentication and role-based authorization.
- Built PostgreSQL-backed data management services using Spring Data JPA.
- Developed responsive React.js and TypeScript user interfaces for document management and conversational search.
- Containerized the application using Docker and deployed it in a cloud-hosted environment.
- Followed layered architecture and REST API best practices to build a maintainable and scalable application

Achievements

Recognized as Employee of the Month for consistently delivering high-quality features ahead of schedule and contributing to successful project deliveries.
